Application for Junior Digitalization Consultant, AI and Business Analysis (Job ID 486485)

Dear Hiring Team,

I am writing to apply for the position of Junior Digitalization Consultant, AI and Business Analysis at Siemens Global Business Services. The simplest reason I am applying is that I would genuinely like to be part of Siemens. There are very few companies that combine the scale, the technical depth, and the willingness to redefine themselves the way Siemens is doing right now, and that is exactly the kind of environment I want to contribute to.

AI is at the centre of my daily work. I build with it, I test what it can and cannot do, and I bring those findings back into how organisations actually operate. At Luminous Group I help clients move from AI adoption to AI capability, while at the same time working hands-on inside our own architecture, designing the layer that makes AI usable for people who are not engineers. That dual role of building and advising has taught me something I do not think you can learn any other way. AI only delivers when the people around it can engage with it on their own terms.

I have followed the "One Tech Company" direction with real interest. The ambition to bring hardware, software, and services into one integrated offering is exactly the kind of transformation where AI plays a defining role. I believe the experience I have built, and the way I think about human-AI collaboration, could help Siemens move further in that direction. I am ready to be part of that change, and I would learn a great deal from doing it inside a company like yours.

Thank you for considering my application. I would very much welcome the opportunity to meet you and the team.

Sincerely,

Klemen Kocic
