Professional Experience

Luminous Group, Munich

07/2025 – Present

AI Solutions Architect

- Co-architect of **Luminosity**, our internal **multi-agent** multi-person production system (30 agents across 5 machines), built around the three-layer system architecture behind the company's "AI that instruments the human" thesis.
- Built Luminosity's production pipeline and the team-coordination workflows that keep the distributed team aligned, plus a layered guardrail-hook system (pre-tool, post-edit, stop, and pre-commit gates) that enforces design and safety as agents write production code.
- Co-built the company's knowledge graph (Tana, Obsidian) that keeps track of cross-team collaboration, tasks, deadlines, and ownership.
- Built and operate the company's weekly AI-intelligence pipeline: ~14 parallel agents pull from 100+ selected sources across 12 categories, producing actionable intelligence tied to the specific agents and team members it concerns, surfaced wherever each person works (Slack, Tana, GitHub, Notion, Word, Excel, WhatsApp).
- Co-led ~6 capability-assessment engagements with senior leaders across healthcare, sport, law, marketing, automotive sales, and architecture. Helped them translate ambiguous AI goals into specific workflows their teams adopted.
- Co-inventor on **patents** covering multi-agent multi-team coordination.
- Shape Luminous Group's editorial voice on public surfaces (website, positioning, bios) with the founding team. Co-author of eight of the twenty essays on human-AI collaboration.

NHS Personal Training GmbH, Munich

01/2025 – 02/2026

Technical Lead

- Architected and co-built the full system: React Native (Expo) apps for clients and coaches over a Ruby on Rails + PostgreSQL backend, covering scheduling, training plans, exercise library, invoicing, and point-of-sale with role-based access. Led 6 offshore engineers at **87%** on-time release; adopted by every coach and client, still in daily production use.
- Built training-plan generation in our methodology software the way the gym's coaches prefer to write plans, with an AI layer on top for added support, cutting training-plan creation from 4 hours to 30 minutes.
- Built the bilingual corporate website solo, plus 5 partner portals expanding B2B reach.

MTM Personal Training, Berlin

04/2024 – 12/2024

Personal Trainer · Executive Clients

- Coached executives and founders one-on-one in a premium studio; built a network of 40+ German founders and CEOs whose relationships informed later consulting and product work. Domain fieldwork that became the foundation for Charles (AI strength coach).

MetaKing Studios, Stockholm

02/2022 – 02/2024

Project Manager

- Shipped **BLOCKLORDS**, an online blockchain strategy game that reached **\$40M** in trade volume; led a 10-person cross-timezone team and cut the deployment projection 6 → 4 months at **97%** sprint velocity.
- Coordinated the team across Jira, Asana, and Miro from architecture to game economy (using Machinations) to the Unity build; built the Unity-to-blockchain bridge for the Direct Sales feature (**\$200K** in direct revenue), designed to stay non-intrusive so players never had to touch the on-chain layer.
- Owned go-to-market for the BLOCKLORDS launch: marketing materials, community activation across Discord, Telegram, and X, partnerships with Web3 gaming guilds, launch-day coordination across regions, and on-chain growth tracking after launch.
- Built Grafana and Tableau dashboards for on-chain analytics, giving leadership real-time visibility into game-economy health and player behaviour.

Program Manager & Data Analyst

- Shipped 5 gaming launches across Ethereum, Polygon, and BSC; managed Lighthouse, a fund-generating platform supporting 10+ external game developers; negotiated ~\$500K investor funding (~9 months runway).
- Partner-ecosystem analytics drove 30+ integration decisions and 460% MAU growth (10K → 56K).

Selected Projects

Charles: AI strength-training coach on the App Store. Periodised programmes that rebuild session by session. Flutter, Supabase, pgvector (two-layer architecture), multi-model orchestration (Claude, Gemini), six deterministic filter layers wrapping the model.

My People: a private relationship memory that AI agents read and write through an MCP server. Next.js, React, Supabase, Stripe.

CMO: marketing-officer AI agents for team chat that read your repository, ground every claim in what actually shipped, and post only after human approval. Astro, Vercel.

Viadio: AI memory video app on the App Store and Google Play. Turns a user's existing phone photos into a memory video, with the AI invisible to the user.

AppLess OS: a macOS app that renders your filesystem as an interactive 3D canvas with pluggable AI and tool connectors. Electron, React, Three.js, Model Context Protocol.

ccswitch: a free, single-file Bash CLI that runs multiple Claude Code accounts concurrently in separate terminals.

Also shipped: [ViaVia](#) (multi-city European travel), [CelesteAI](#) (localised astrology), and [ShipStack](#) (open-source production framework for AI-native software).

Skills & Competencies

AI & LLMs: Claude (Claude Code, Agent SDK), GPT, Gemini, Mistral, Llama (local), multi-model orchestration, Model Context Protocol (MCP) servers, RAG, knowledge & context graphs, Pinecone, LangGraph, agent architecture, evaluations, prompt design

Engineering: TypeScript, Python, Swift/SwiftUI, Flutter/Dart, React/Next.js, Astro, Node.js, Bun, Electron, Three.js, Tailwind CSS, PostgreSQL, Supabase, pgvector, Drizzle, Stripe, Vercel, Vitest, Playwright, Tana, Obsidian

Education

University of Ljubljana, Ljubljana, Slovenia

09/2019 – 06/2023

BA, International Business

- Bilateral exchange at University of Seoul (2021–2022), on scholarship.
- Self-taught engineer since 2018. Shipped production iOS, Android, web, blockchain, AI systems, and knowledge graphs alongside the degree.

Certifications

Agentic Engineering (Industrial Logic) · Google Project Management · Introduction to Negotiation (Yale) · Leading Teams (UIUC) · Meta Backend Developer · Precision Nutrition L1

Languages

Slovenian (Native) · English (C2) · Serbo-Croatian (B2) · German (B1)

Selected Writing

They Built It. They Can't Control It. (with Barton Friedland and Jim Highsmith) · *What Are You Scaling?* (with Mark Béliczky and Barton Friedland) · *What Agents Cannot Want* · *The Displacement of Judgement* (with Barton Friedland). All at luminousgroup.net/liminality.
